SUMMARY

Junior backend developer with hands-on experience building REST APIs, real-time applications, and computer vision systems in Python. Built and shipped multiple backend projects using Django, FastAPI, and WebSockets. Currently pursuing an M.Sc. in Computer Science (Data Science) at the University of Vienna. Seeking a junior role in backend or software engineering.

TECHNICAL SKILLS

Proficient: Python, Django, FastAPI, Flask, PostgreSQL, SQLite, REST APIs, WebSockets, OpenCV, Git

Familiar: TensorFlow, PyTorch, Scikit-learn, React, JavaScript, Docker, Oracle SQL, PyTest, Postman

Concepts: OOP, data structures, API design, schema design, debugging, modular development

EXPERIENCE

Machine Learning Engineer Intern

Jun. 2025 – Dec. 2025

Skolyn

Remote

- Managed and monitored ML training pipelines in Python, tracking experiment runs and validating model outputs across iterations.
- Evaluated prediction results against ground truth data to identify inconsistencies and support model improvements.
- Developed test scripts to verify model behavior across edge cases, improving reliability of experimentation workflows.

Co-Founder & Backend Developer

Oct. 2023 – Mar. 2025

CWB Startup

Hybrid

- Co-founded a startup building university-oriented web platforms and applications.
- Developed backend features using Django, including routing, data handling, and application logic.
- Built and integrated basic full-stack features across web applications.

Python Mentor & Code Reviewer

Aug. 2024 – Dec. 2024

Freelance

Remote

- Coached students in Python, OOP, and backend development using Flask and Django.
- Reviewed code and provided structured feedback on debugging, API design, and architecture basics.

Front-End Mentor & Code Reviewer

Apr. 2024 – Aug. 2024

Freelance

Remote

- Supported students in HTML, CSS, and JavaScript, focusing on DOM manipulation and API integration.

PROJECTS

Fatigue Detection System | *Python, OpenCV, Computer Vision* | [github](#)

- Built a real-time driver fatigue detection system using webcam input and eye/head motion analysis.
- Designed a full computer vision pipeline including face detection, landmark extraction, and fatigue classification.
- Applied filtering techniques to reduce false positives from short eye closures.

Django Real-Time Chat App | *Python, Django, Django Channels, WebSockets, Oracle SQL* | [github](#)

- Built a real-time chat application using Django, Django Channels, and WebSockets.
- Implemented authentication, chat rooms, and real-time messaging.
- Stored and managed persistent messages using Oracle SQL.

Document Validation System | *Python, OpenCV, OCR* | [github](#)

- Developed a computer vision pipeline for document validation using OCR and image processing.
- Designed structured outputs to make validation steps traceable and explainable.

IT Project KPI Tracker | *Python, Dashboard* | [github](#)

- Built a dashboard for tracking project deadlines and workload distribution.

Garbage Classification Model | *Python, TensorFlow* | [github](#)

- Trained an image classification model for waste categorization using data augmentation and evaluation pipelines.

EDUCATION

University of Vienna <i>M.Sc. Computer Science, Data Science</i>	Vienna, Austria <i>Oct. 2025 – Jul. 2027</i>
Riga Technical University <i>B.Sc. Computer Science</i> • Thesis: Computer Vision System for Fatigue Detection Using Eye Tracking and Head Motion Analysis. Grade: 9/10	Riga, Latvia <i>Sep. 2022 – Jun. 2025</i>
Vilnius University <i>Erasmus+ Exchange, Mathematics and Informatics</i>	Vilnius, Lithuania <i>Feb. 2024 – Jun. 2024</i>
